## SUMMARY

Software Engineering intern and 2027 B.E. graduate with hands-on production experience building full-stack applications, backend microservices, and cloud-integrated systems. Proficient in Python, Java, and JavaScript with strong framework knowledge across Django, REST APIs, and gRPC. Delivered a 30% reduction in data processing overhead and 20% efficiency gains within Agile teams. Eager to contribute to ShareFile's React/TypeScript frontend and C# ASP.NET Core backend while growing cloud and testing expertise.

## EXPERIENCE

### AI Engineer Intern — Backend & Software Systems · Hasprana Health Care Solutions

Jan 2026 – May 2026 · Bengaluru, India

- Built Python and Java automation pipelines for healthcare data processing, reducing manual effort by **30%** and enabling real-time analytics across **10,000+ daily records** — backend engineering directly applicable to ShareFile's microservices architecture.
- Engineered high-throughput backend services processing **5+ concurrent data streams** with HIPAA-compliant privacy controls and strict fault-tolerance, reinforcing secure data-handling practices aligned with ShareFile's compliance-first approach.
- Integrated ML modules into enterprise applications improving operational efficiency by **20%**, delivering measurable outcomes within a 6–8 person Agile/Scrum squad with **100% sprint completion** across a 5-month engagement.
- Authored **40+ unit and integration tests** for application components, achieving 95%+ code coverage on critical data-pipeline modules and ensuring reliability in production workflows.
- Managed **15+ feature branches** across a team Git repository, conducting structured code reviews and maintaining CI-aware workflows that reduced merge conflicts by 40%.

## PROJECTS

### Secure Healthcare & Financial Document Portal

Node.js · REST APIs · Docker · JWT · Role-Based Access Control

- Built a full-stack document management portal with secure file sharing, role-based access control, and audit logging — directly mirroring ShareFile's core product domain of secure document collaboration.
- Containerised the application with Docker for consistent local and cloud deployment; implemented **JWT-based authentication** protecting access across **3 user roles**.

### NexusSearch — Segregated Vector Search Engine

gRPC Microservices · Horizontal Sharding · Custom Indexing · Python

- Architected a vector search engine using gRPC microservices and horizontal sharding, cutting average query latency by **35%** over single-node baseline — experience building scalable backend services.
- Defined API contracts and service boundaries across **4 independent microservices**, reinforcing architecture patterns applicable to ASP.NET Core microservice development.

### Medical Report Simplifier — 1st Place, BMS Hackathon

Django · LLM Inference · PDF Generation · JavaScript

- Led full-stack development of an AI-powered web application (Django backend, JavaScript frontend), automating PDF report generation and cutting patient report-reading time by **50%**.
- Outperformed all **20+ competing teams** at BMS Hackathon; praised for practical impact and technical depth.

### Sandboxed Algorithmic Judge & AI Code Reviewer

Python · Groq/Llama · Automated Code Analysis · REST API

- Engineered an automated code analysis pipeline evaluating correctness, time/space complexity, and quality across **5+ languages**, with a clean REST API layer serving **100+ test cases**.

### AeroCache — Clustered In-Memory Caching System

Java · Consistent Hashing · LRU/LFU Eviction · Load Testing

- Built a clustered caching system in Java achieving **99.9% uptime** under load testing — demonstrates strong fundamentals in a statically-typed language ecosystem relevant to C#.NET.

Decentralised Task & Resource Scheduler

Python · Microservices · Queue-based Architecture

- Designed and implemented a task scheduler with worker coordination across **3 independent service nodes**, gaining hands-on exposure to event-driven microservice patterns applicable to cloud-native backends.

Medical RAG System

LangChain · ChromaDB · Llama · Groq API · Python

- Built an end-to-end Retrieval-Augmented Generation pipeline achieving **~40% latency reduction** with accurate responses validated across **500+ test queries** — backend data pipeline engineering.

TECHNICAL SKILLS

|              |                                                                                      |
|--------------|--------------------------------------------------------------------------------------|
| Languages    | Python, Java, JavaScript, SQL   Exposure: C# / .NET fundamentals                     |
| Frontend     | JavaScript, React (fundamentals), TypeScript, Django templates, REST API integration |
| Backend      | Django, REST APIs, gRPC, Microservices, Node.js, ASP.NET Core (learning)             |
| Databases    | PostgreSQL, MongoDB, ChromaDB, in-memory caching (LRU/LFU, consistent hashing)       |
| DevOps/Cloud | Docker, Git/GitHub, CLI tools   AWS fundamentals: EC2, Lambda, S3, API Gateway       |
| Testing      | Unit & integration testing (pytest, unittest)   Test-driven debugging                |
| Practices    | Agile/Scrum, HIPAA compliance, ServiceNow, code review, CI-aware Git workflows       |

EDUCATION

B.E. in Artificial Intelligence & Machine Learning

Dayananda Sagar Academy of Technology & Management, Bengaluru · Aug 2023 – May 2027 · 2027 Batch

ACHIEVEMENTS & CERTIFICATIONS

- **BMS Hackathon — 1st Place:** Won with Medical Report Simplifier, outperforming 20+ competing teams; recognised for practical impact and technical depth.
- **Smart India Hackathon 2025 — Institutional Nominee:** Selected from 100+ teams for an innovative real-world technical solution.
- **IEEE Publication — NQComp 2026 Conference:** Peer-reviewed paper accepted on AI-enabled wildlife preservation and management.
- **Certified System Administrator (ServiceNow)**
- **Machine Learning Fundamentals · Introduction to NLP** Infosys Springboard certified courses.
